

ALGEBRA

CLASSICAL, MODERN, LINEAR & BOOLEAN

R. M. KHAN

Contents

Part I : CLASSICAL ALGEBRA

Chapter 1	Complex Numbers	3-21
	Complex number, Imaginary conjugates, Modulus and Amplitude, Square root, Geometrical representation, Cube roots of unity	
Chapter 2	De Moivre's Theorem	22-44
	De Moivre's theorem, Applications (solution of equations; expansion of $\cos n\theta$, $\sin n\theta$, $\cos \alpha$, $\sin \alpha$; real factors of a polynomial)	
Chapter 3	Sine, Cosine, Logarithm and Exponential Values of Complex Numbers	45-67
	Binomial theorem, Exponential series, Euler's exponential values of sine and cosine, Logarithm of a complex number, Definition of a^z , Inverse circular functions, Hyperbolic functions, Expansion of $\cos^n \theta$ and $\sin^n \theta$, Gregory's series	
Chapter 4	Polynomial	68-82
	Polynomial, Synthetic division, Remainder theorem, Euclid's algorithm, H.C.F., Theorems, Maximum and Minimum values of the polynomial	
Chapter 5	Equation and Transformations	83-115
	Equation, Fundamental theorem, Imaginary roots, Roots as quadratic surds, Relation between roots and coefficients, Multiple roots, Transformation of equations, Reciprocal equations	
Chapter 6	Symmetric Functions of Roots	116-128
	Symmetric functions of roots, Orders and weights, Sums of powers of the roots, Newton's theorem	
Chapter 7	The Cubic and the Biquadratic Equation	129-154
	Cubic equation, Equation of squared differences of the roots, Criteria of roots, Cardan's solution, Biquadratic equation, Euler's solution and criteria of roots, Descartes' solution, Ferrari's solution	
Chapter 8	Binomial Equation and Special Roots	155-161
	Binomial equation, Properties of roots of $x^n - 1 = 0$, Special roots of unity, Number of special roots	
Chapter 9	Location of Roots	162-188
	Harriot-Descartes' rule of signs, Some theorems, Rolle's theorem, Integral and fractional root, Limits of roots, Incomplete equations, De Gua's rule, Fourier's theorem, Budan's statement, Sturm's functions and theorem	

Chapter 10 Inequalities 189–222

Schwartz and Cauchy's inequality, Theorem on means, Theorem on weighted means, m th Powers Theorem, Maxima and Minima, $(1 + \frac{x}{m})^m < (1 + \frac{x}{n})^n$ and $(1 - \frac{x}{m})^{-m} > (1 - \frac{x}{n})^{-n}$ when $x < m$, Weierstrass's inequality, $\frac{x^m-1}{m} \geq \frac{x^n-1}{n}$ as $m \geq n$, $mx^{m-1}(x-y) > x^m - y^m > my^{m-1}(x-y)$ when $m < 0$ or > 1 , $\frac{\sum x_i a_i^m}{\sum x_i} \geq \left(\frac{\sum x_i a_i}{\sum x_i}\right)^m$ as m does not or does lie between 0 and 1, $\frac{\sum a_i^{x+y}}{n} \geq \frac{\sum a_i^x}{n} \cdot \frac{\sum a_i^y}{n}$ as x and y have the same or opposite signs, Holder's inequality, Jensen's inequality, Jensen's theorem, Minkowski's inequality

Chapter 11 Determinant 223–274

General definition of a Determinant, Properties of Determinants, Minors and Cofactors, Addition of Determinants, Laplace's theorem, Multiplication of Determinants, Adjoint Determinant, Reciprocal Determinant, Jacobi's theorems, Symmetric Determinant, Skew Symmetric and Skew Determinant, Cramer's rule, Equations

Chapter 12 Matrix 275–319

Definition, Types of matrices, Matrix algebra, Matrix multiplication, Kinds of matrices (idempotent, nilpotent, periodic, involuntary), Transposition, Symmetric and Skew symmetric matrices, Adjoint and reciprocal matrices, Inverse of a matrix, Orthogonal matrix, Complex matrix, Minor, Submatrix, Elementary matrix, Equivalent matrix, Rank and nullity, Normal form, Echelon form, Congruent matrix

Chapter 13 Sequence 320–346

Sequence, Bounds, Monotonic sequences, Convergent sequence, Theorems on convergent sequences, Theorems on monotonic sequences, Limit points, Cauchy's general principle of convergence, $u_n = (1 + \frac{1}{n})^n$, Cauchy's limit theorems

Chapter 14 Infinite Series 347–377

Geometric series, Properties of infinite series, General principle of convergence, Series of positive terms, Abel's or Pringsheim's theorem, Comparison test, Test of $\frac{1}{1^p} + \frac{1}{2^p} + \frac{1}{3^p} + \dots$, Cauchy's root test, Cauchy's condensation test, Cauchy's or Maclaurin's integral test, Kummer's test, D'Alembert's test, Raabe's test, De-Morgan's and Bertrand's test, Gauss's test, Cauchy's logarithmic test, Alternating series, Rearrangement of terms, Power series

Chapter 15 Summation of Series 378–407

Arithmetic series, Geometric series, Mixed series, Binomial series, Exponential series, Logarithmic series, Recurring series, Σu_n and $u_n = v_n - v_{n-1}$, Σu_n as $u_n =$ product of r factors in A.P., Σu_n as $\frac{1}{u_n} =$ product of r factors in A.P., Method of differences, Summation of trigonometrical series

Chapter 16 Difference Equation

Argument, Entry, Interval
function, Operator E , Op
neous and non-homogene

Chapter 17 Continued Fraction

General continued fraction
Simple continued fraction
Converging or periodic continued
fraction, Symmetric continued
fractions of a recurring continued
Applications

Part II: AP

Chapter 1 Elementary Discussion

Set, Types of sets, some Venn diagrams, Set operation, symmetric difference (duality), De-Morgan's law, Equivalence class, Partitions, Functions of mappings, Inverse Transposition, Index permutation

Chapter 2 Integers

Natural number, Peano's axioms, Induction, Whole numbers, Addition, Subtraction, Multiplication, Division, Least common divisor, L.C.M., Fractions, Decimals, Rational numbers, Unique factorization theorem, Modular arithmetic modulo m , Residue classes, Inverse modulo m , Fermat's little theorem, Linear congruences.

Chapter 3 Groups

Operation, Groupoid, groups, Integral point, Modulo system, Conjugation on subgroup, Centre of and alternating) group, Cosets, Lagrange's theorem, groups, Quotient of factor groups, Kernel of a homomorphism, Cayley's theorem

Chapter 16 Difference Equation**408-427**

Argument, Entry, Interval, Difference, Factorial notation, Factorial function, Operator E , Operator D , Difference equation (homogeneous and non-homogeneous)

Chapter 17 Continued Fraction**428-466**

General continued fraction (terminating and non-terminating), Simple continued fraction, Convergent, Intermediate convergent, Recurring or periodic continued fraction, Simple recurring continued fraction, Symmetric continued fraction, Determination of the convergents of a recurring continued fraction with one recurring element, Applications

Part II : ABSTRACT ALGEBRA**Chapter 1 Elementary Discussions of Set****469-508**

Set, Types of sets, some theorems, Power Sets, Universal set, Euler-Venn diagrams, Set operation (union, intersection, disjoint, complement, symmetric difference, product, cardinal number, principle of duality), De-Morgan's laws, Relations, Equivalence relation, Equivalence class, Partitions, Mapping, Function and relation, Composite of mappings, Inverse mapping, Permutation, Cyclic permutation, Transposition, Index laws, Theorems on permutation, Even and odd permutation

Chapter 2 Integers**509-537**

Natural number, Peano's axioms, Order relation, Principle of induction, Whole number, Integers, Divisibility in integers, Greatest common divisor, L.C.M., Existence and Uniqueness of GCD, Prime numbers, Unique factorization theorem, Module system, Congruent modulo, Residue classes, Fermat's Little Theorem, Wilson's Theorem, Linear congruence, Phi-function

Chapter 3 Groups**538-591**

Operation, Groupoid, Composition table, Group, Theorems on groups, Integral power of an element, Semigroup, Theorems on Modulo system, Complex and subgroup of a group, Theorems on subgroup, Centre of group, Cyclic group, Permutation (symmetric and alternating) groups, Groups of symmetries, Klein-four-group, Cosets, Lagrange's theorem, Fermat's Little theorem, Normal subgroups, Quotient or factor group, Homomorphism and isomorphism, Kernel of a homomorphism, Fundamental theorem of homomorphism, Cayley's theorem, Theorems on isomorphism

Chapter 4 Rings and Fields**592-619**

Ring, Ring with unity, Ring with zero divisors, Skew field, Cancellation laws, Ring of integers modulo n , Some properties, Integral domain, The characteristic, Subring, Field, Some theorems, Sub field, Ideal, Quotient ring, Homomorphisms of rings, Isomorphism of rings

Part III : LINEAR ALGEBRA**Chapter 1 Vector Space****623-658**

Vector, Vector space, Some properties of vector space, Vector subspace, Theorems on subspace, Linear combination of vectors, Linear span, Complementary subspaces, Linear dependence and independence with theorems, Deletion theorem, Basis and dimension, Steinitz replacement theorem, Existence theorem, Extension theorem, Dimension of a subspace

Chapter 2 Rank of Matrices and Linear Equations**659-682**

Row space and column space, Some theorems, Invariance of sum or row ranks and row nullity, The row rank and the column rank of a matrix are equal, $\rho(AB) \leq \min\{\rho(A), \rho(B)\}$, Linear equations (homogeneous and non-homogeneous), Fundamental theorem on non-homogeneous system

Chapter 3 Inner Product Space**683-699**

Inner product, Inner product space, Norm, Cauchy Schwartz's inequality, Triangle inequality, Orthogonality, Orthogonal complement, Some theorems, Gram Schmidt Process of orthogonalization

Chapter 4 Linear Transformations**700-735**

Linear mappings, Range space and null space, Rank of Linear transformation and nullity, Theorem on unique mapping, Algebra of linear transformations, Composite mapping, Invertible mapping, Non-singular transformation, Matrix of a linear transformation, Some theorems, Matrix of the composite mapping, Matrices of a linear transformation relative to different bases, Orthogonal transformations

Chapter 5 Eigen Values and Quadratic Forms**736-771**

Characteristic value problem, Eigen values and eigen vectors, Theorems on eigen values and eigen vectors, Algebraic multiplicity and geometric multiplicity, Matrix polynomial, Remainder theorem, Cayley-Hamilton theorem, Diagonalisation of matrices, Orthogonal diagonalisation, Real quadratic form, Congruence matrices, Reduction to canonical form, Rank, Index, Signature, Geometrical applications

Part I**Chapter 1 Boolean Algebra**

Definition, Universal order relation, Sum form, Conjunctive

Chapter 2 Switching Circuits

States, Basic network, Representation, circuit

INDEX**UNIVERSITY QUESTIONS**

CALCUTTA UNIVERSITY

BURDWAN UNIVERSITY

NORTH BENGAL UNIVERSITY

Part IV : BOOLEAN ALGEBRA

Chapter 1	Boolean Algebra	775-792
	Definition, Uniqueness, Principle of duality, Some results, Partial order relation, Subalgebra, Boolean functions, Disjunctive normal form, Conjunctive normal form, Conversion	
Chapter 2	Switching Circuits	793-801
	States, Basic network, Relation between circuit and Boolean function, Representation of a circuit by a function or a function by a circuit	
INDEX	...	1-5
